West Lothian Key Economic Indicators

West Lothian Economic Partnership

February 2011

An update from West Lothian Economic Partnership to help you understand the local economy.

As expected, unemployment has risen slightly with seasonal recruitment tailing off, however, West Lothian continues for a fourth month to have an unemployment rate lower than the Scottish average.

- The number of JSA jobless in West Lothian for January is 4,569 up from 4,257 in December. This is an increase of 312 and was expected given the usual seasonal labour market tendency of firms to release temporary staff in December and January.
- West Lothian's unemployment rate of 4.0% is below the Scottish (4.3%) rate; but above the Great Britain (3.7%) rate. West Lothian's unemployment rate ranks joint 11th highest out of all Scottish local authority areas.
- Youth unemployment (18-24 year olds) in West Lothian for January is 1,330. This is an increase of 105 on the last month.
- There were 606 notified Jobcentre vacancies in January - a net decrease of 317 from December 2010. This is again an expected seasonal trend – there were 632 vacancies in January 2010.
- The ratio of jobseekers to jobcentre vacancies stands at 8 jobseekers for every vacancy advertised in West Lothian jobcentres. In comparison, Scotland's ratio is 10:1, Great Britain is 6.2:1 with Orkney having the highest ratio of 33.9:1 (34 jobseekers for every vacancy) of claimants to vacancies of Scottish local authorities.

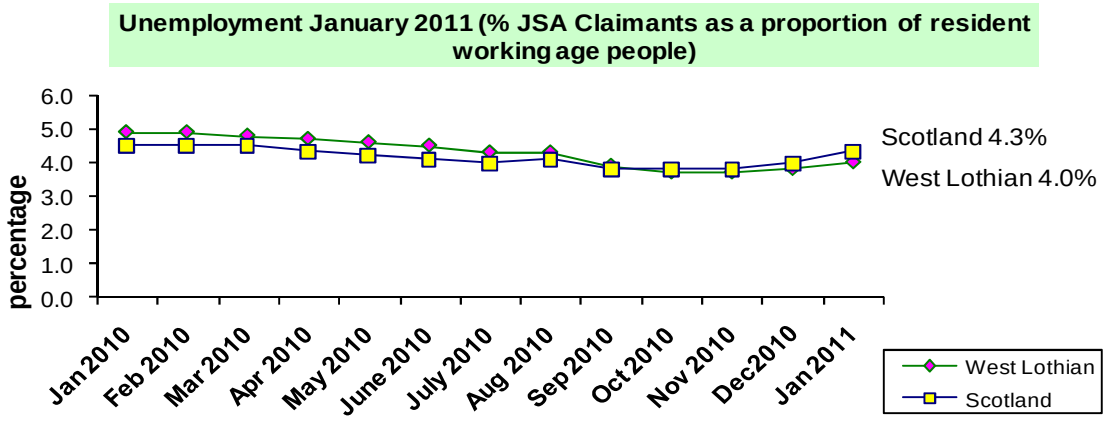
Jobs and Investment

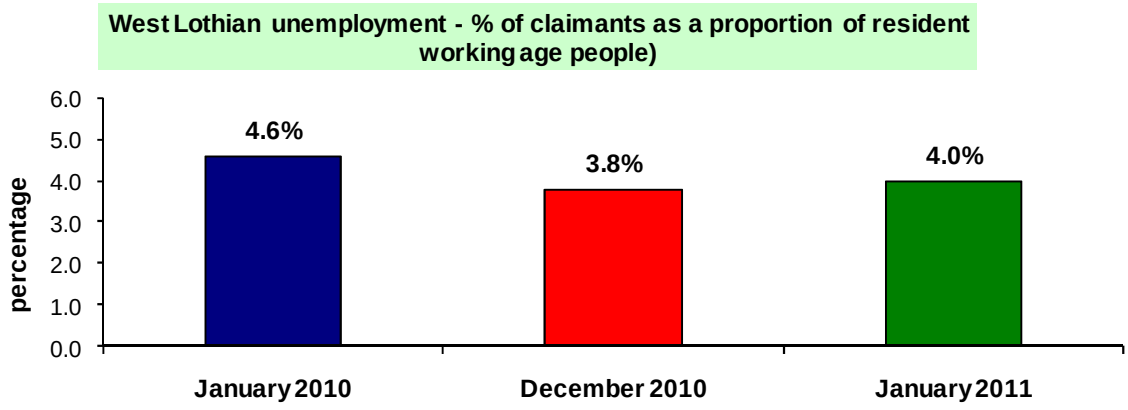
Here are some positive jobs, investment and business news items for the West Lothian area:

- West Lothian firms are being urged to make the most of the Scottish government's £2 billion investment in the **Forth Replacement Crossing** and related works. Final tenders from the two lead consortia have now been submitted and a contract should be signed by Easter 2011 with construction work commencing later in the year. A wide variety of sub contracting opportunities will be available, covering fields as diverse as construction, engineering, catering, cleaning and accommodation provision.
- **West Lothian's top companies** have performed strongly in the last year according to a new report by Scottish Business Insider Magazine. 25 of Scotland's top 500 companies (5%) are headquartered in West Lothian. Strong performers this year include top ranked Sky, Johnson and Johnson, and Jabil.
- A cutting-edge West Lothian technology firm is set to take-off, thanks to a funding boost. Bathgate based **aB Simulations**, whose work includes producing flight simulators and other immersive projection theatres, have secured £10,000 first round development funding from the Inspired and SEEKIT initiatives.
- Livingston technology firm **Design LED Products** has attracted a further £1.1M investment funding package coordinated by Braveheart Investment Group. The £1.1M comprised funds from Braveheart clients, Siemens AG, Scottish Enterprise's Scottish Co-investment and Portfolio Funds, as well as from existing shareholders and private individuals.
- Pre-tax profits at the broadcaster **BSkyB** rose to £467m in the last six months of 2010, with revenues up 15% to £3.2bn. The broadcaster employs over 4,000 people at its call centre in Livingston. BSkyB said increased demand for high definition (HD) television services - up by 68% on a year ago - had boosted results.
- Record breaking results at **Livingston Designer Outlet**. Post Christmas trading from 26 December - January 2 was up 25% compared to the same period last year. Karen Stewart, centre manager said "Sales from Boxing Day onwards were phenomenal with the centre seeing double digit growth compared to last year."

Unemployment

Unemployment in West Lothian stands at 4.0% (% is a proportion of resident working age people) in January 2011. The latest JSA claimant count figure shows an increase of 312 on the previous month and now stands at 4,569. West Lothian's unemployment rate of 4.0% is lower than the Scottish rate of 4.3% although higher than the Great Britain rate of 3.7%.





Source: ONS claimant count rates

Unemployment - total JSA claimants (January 2011)			
	Males	Females	Total
West Lothian (numbers)	3,280	1,289	4,569
West Lothian (%)	5.9%	2.2%	4.0%
Scotland (%)	6.3%	2.3%	4.3%
Great Britain (%)	5.2%	2.3%	3.7%

Source: ONS claimant count with rates and proportions
Note: % is a proportion of resident working age people

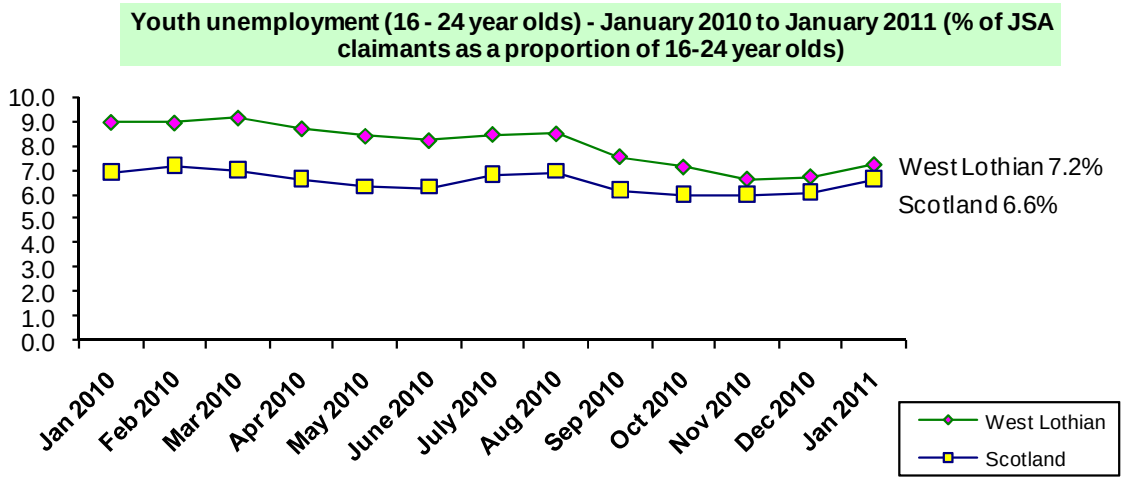
Included on page 10 is a breakdown of unemployment by local area within West Lothian based on the former 32 Scottish local authority wards. This shows that those wards with the highest rate of unemployment are Polkemmet (7.9%), Craigshill (7.5%) and Armadale Central (7.3%). Those with the lowest are Kingsfield (1.1%), Murieston (1.8%) and Kirkton (1.8%). In general, unemployment is higher in the southwest of West Lothian and lower in Linlithgow and the southeast of the area.

The latest unemployment data for the UK based on the preferred government measure, is for the three months to December. The number of people unemployed fell by 44,000 to 2.5 million (a rate of 7.9%). Meanwhile, the total number of people claiming JSA increased by 2,400 to 1.46 million.

N.B. JSA based unemployment figures do not provide the full picture. The headline JSA figure, however, does help to indicate the latest trend or change at a national or local level and whether the economic down turn is beginning to bite. The Government's favoured method of measuring unemployment - the ILO method - does not readily translate into up to date local area estimates.

YOUTH UNEMPLOYMENT

Youth unemployment - 16 to 24 year olds includes the MC,MC group and it is therefore important that it is tracked. The following graph shows youth unemployment as a percentage of all 16 to 24 year olds, comparing West Lothian with Scotland. West Lothian has a higher proportion (7.2%) for January than Scotland (6.6%) of youth unemployment. Although both have followed a parallel trend in the last three years.

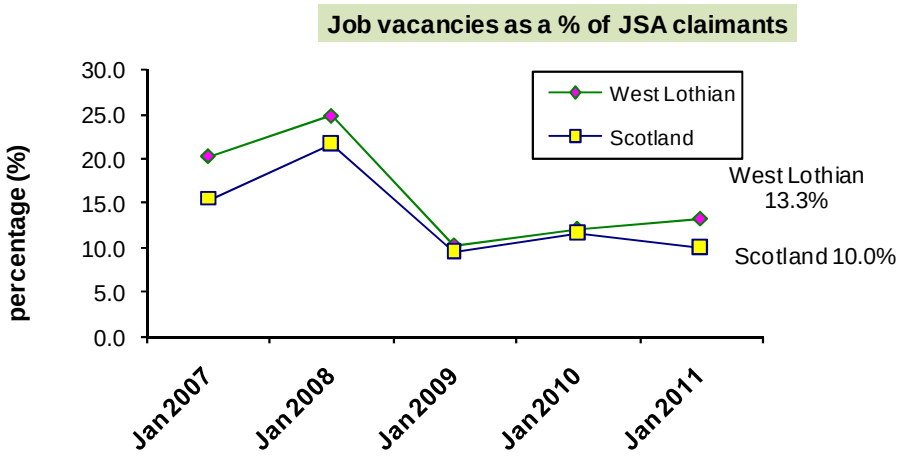


Source: ONS claimant count

N.B. Between 400 and 500, 16 to 17 year olds were registered unemployed with Skills Development Scotland most of whom will not be claiming JSA. Therefore, it is estimated that the total level of unemployment for 16 to 24 year olds is about 2,000.

Job Vacancies

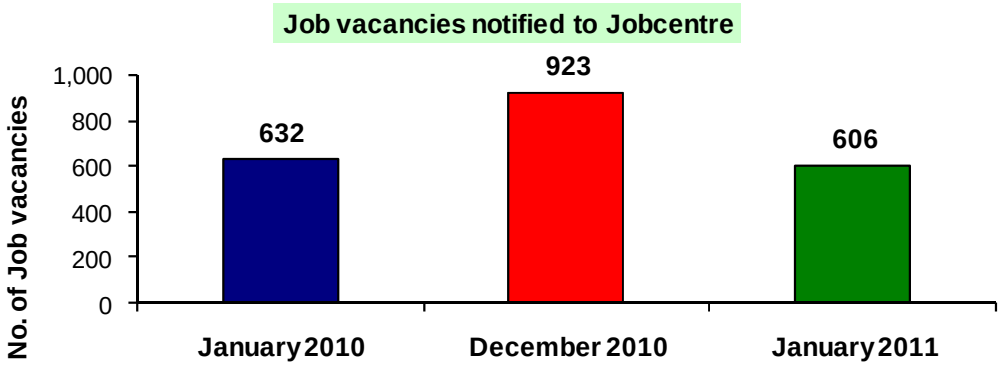
The number and type of Jobcentre Plus vacancies also provide a snapshot of the local labour market. It is estimated that Jobcentre Plus vacancies account for about a third of all available employment opportunities. In West Lothian the most common type of vacancies tend to reflect the main employment sectors e.g. business services, retail and manufacturing.



Source: ONS annual business inquiry employee analysis

The graph above compares the rate of job vacancies expressed as a percentage of the number of JSA claimants for both West Lothian and Scotland. West Lothian's rate for January 2011 stands at 13.3% and Scotland's at 10.0%. This means there are currently 8 jobseekers for every vacancy advertised in West Lothian jobcentres.

The actual number of West Lothian job vacancies for this January is 606. This is a net decrease of 317 vacancies on the month of December — there were 632 vacancies in January 2010.



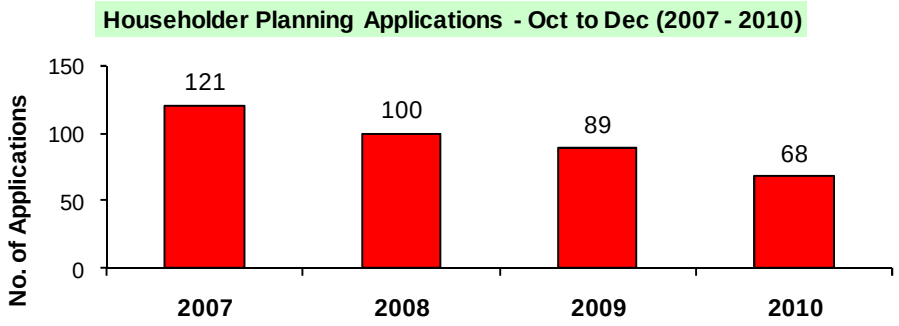
Source: Jobcentre Plus vacancies

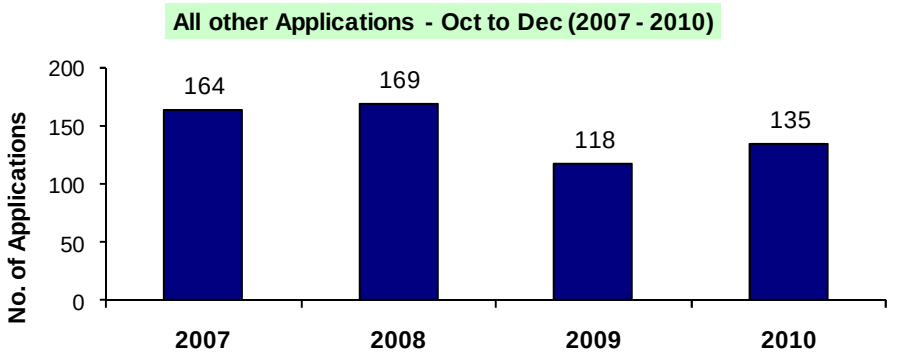
Planning Applications

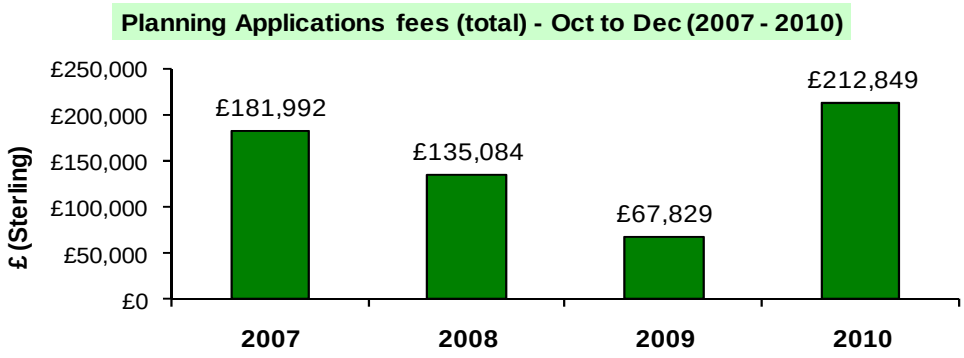
Planning applications provide another measure of the health of the local economy. The numbers of planning applications received indicate levels of business and consumer confidence, economic growth, development investment and development change.

The following charts split planning applications into two categories: householder and all other planning applications. Householder applications include house extensions, conservatories and garages. All other application types include listed building applications, advertisement consent, small-scale individual developments and applications by business and industry.

Because there is seasonal variance in development applications, the charts below focus on change over the period October to December for the last three years. Household applications have fallen since 2008, although these appear to be levelling off in the last year. The large increase in planning application fees received in Qtr 4, 2010 is due to a number of applications for large developments.



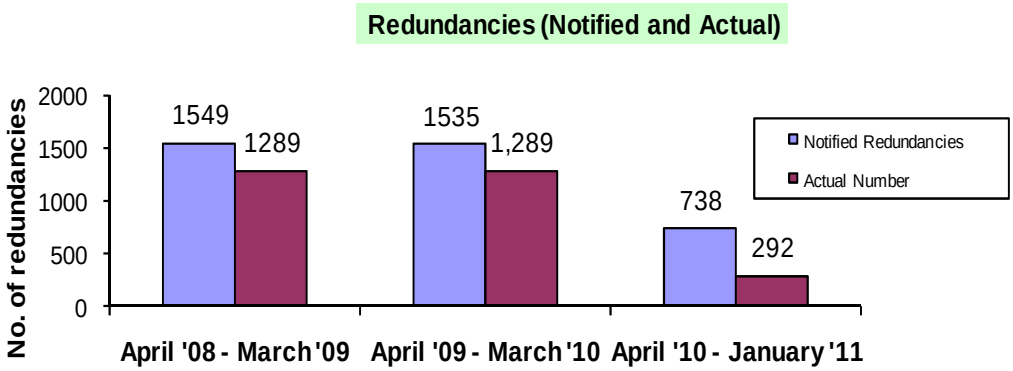




Source: West Lothian Council, January 2010

Redundancies

The level and rate of redundancies are important measures of the business situation. In the first ten months of the financial year (2010/2011) there were 738 notified redundancies of which there were 292 actual or confirmed redundancies.



Source: Skills Development Scotland

N.B. Notified redundancy figures are gathered from firms legally obliged to notify BERR (Department for Business, Enterprise and Regulatory Reform) when proposing to dismiss 20 or more employees as redundant and from those firms who voluntarily notify redundancies of less than 20 employees.

Shop Occupancies

To provide a better perspective of change in the town centres, we intend from next month to include in this part of the Key Economic Indicators report a mix of indicators on high street activity, which will cover business sectors, activities and employment as well as shop occupancy levels. The information will be presented on a quarterly basis.

Making a start, the new quarterly table on shop occupancies below shows the number of shop units occupied (excluding charity shops) as a percentage of total stock for each of West Lothian's six town centres. The percentage of charity shop units in each town is shown separately. A comparison is made between the latest quarter (Oct-Dec 2010) and the same quarter from the previous year.

Shop unit occupancy comparing Quarter 4 — 2010 and Quarter 4 — 2009 - expressed as percentage of total town centre shop units

Town Centre	Quarter 4 — 2010 (%)		Quarter 4 — 2009 (%)	
	Overall occupancy	Charity shops	Overall occupancy	Charity shops
Armadale	95.5	0.0	89.7	0.0
Bathgate	92.8	3.2	93.4	3.3
Broxburn	90.6	0.6	89.9	0.6
Linlithgow	97.3	1.4	96.0	2.0
Whitburn	86.2	1.7	87.8	1.7
Almondvale	88.4	0.6	91.6	0.6

Source: West Lothian Council, December 2010

Three towncentres have increased their overall shop occupancy in relation to this time last year. Bathgate, Almondvale and Whitburn experienced a decrease in shop occupancy in the fourth quarter of 2010 when compared to their own benchmark figure for the same quarter in 2009.

House Completions

The number of house completions in the local economy is a useful barometer for measuring the house building industry's sensitivity to changing economic conditions.

The average monthly completions during the last three financial years has been as follows:

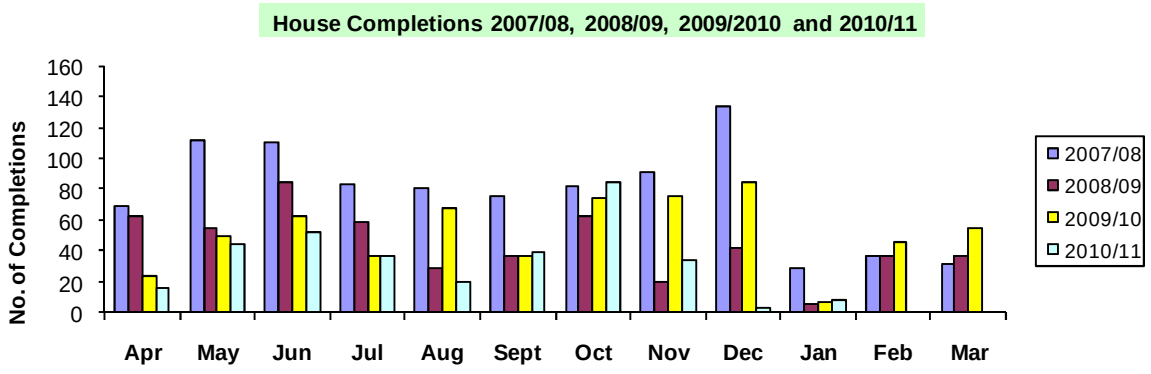
- 2007/08 - 80
- 2008/09 - 43
- 2009/10 - 51

During 2008/09 there was a significant decline in the number of completions but during 2009/10 there was an improvement, partly as a consequence of the council house building programme and increased activity by Housing Associations.

The average number of completions per month over the last 12 months currently stands at 35.

The programmed number of completions for 2010/11 is 347. In the first nine months of this financial year, 370 completions have been achieved so the number of completions during 2010/11 will exceed expectation. The 370 completions so far this financial year compares with 457 for the same period last year.

It is anticipated that the rate of completions will slow down over the coming months due to the number of sites which have recently been completed or are nearing completion.



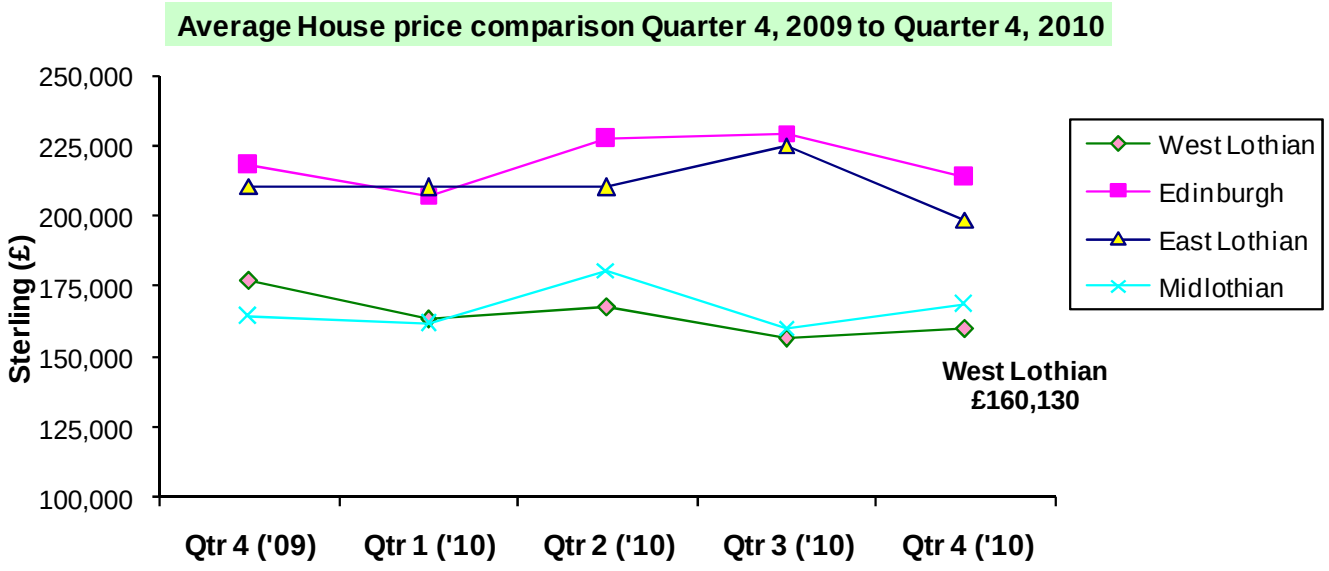
Source: West Lothian Council, February 2011

House Prices

House prices and the housing market are also seen as a barometer to the state of the economy. Housing is the biggest component of most household's wealth. Therefore it has a big impact on the economy. For example, a fall in house prices will reduce consumer confidence. This leads to lower levels of spending; people will be more reluctant to undertake risky investments and borrowing.

The latest figures reveal house prices in most areas across East Central Scotland fell during the last three months of 2010. An annual decline of 2% in Edinburgh took the average price in the City to £213,685. West Lothian and East Lothian saw annual drops of 9.7% and 5.6% respectively. The sharper fall in West Lothian follows a 14.5% rise in late 2009 with prices in the area still higher than two year's previous. Midlothian was the only area to observe an annual increase with a 2.4% rise bringing the average to £168,345.

Analysts explain that the sharp rises seen in West Lothian and Midlothian this spring proved to be a short term spike with prices for this most recent period back in line with the sort of figures that have been seen over most of the last two years.



Edinburgh Solicitors Property Centre (ESPC), January 2011

Comparator Indicators

MONTHLY COMPARATOR INDICATORS

A number of monthly key indicators have been chosen to compare with a number of benchmark local authorities. Both national areas of Scotland and Great Britain have also been included to set comparisons in context. The following table includes indicators on unemployment, youth unemployment and job vacancies.

	JSA Claimants as a % of working age residents (1)	% of 16 to 24s claiming JSA (2)	Ratio* of jobseekers to job vacancies (3)
Clackmannanshire	5.8%	9.9%	16.6:1
Edinburgh, City of	3.2%	4.1%	5.7:1
Falkirk	4.8%	8.1%	9.6:1
Fife	4.6%	6.9%	15.5:1
Midlothian	4.0%	8.1%	10.6:1
North Lanarkshire	5.6%	8.8%	13.6:1
South Lanarkshire	4.6%	7.5%	11.2:1
West Lothian	4.0%	7.2%	7.5:1
Scotland	4.3%	6.6%	10.0:1
Great Britain	3.7%	5.7%	6.2:1

Sources:
(1) ONS claimant count
(2) ONS claimant count/ONS mid-year (2009) population estimates
(3) ONS claimant count/Jobcentre Plus vacancies

***** for example**,** there are about four (7.5:1) jobseekers for every vacancy advertised in West Lothian jobcentres.

ANNUAL COMPARATOR INDICATORS

Similarly, a number of annual indicators have been chosen to compare with the same local authorities and Scotland and Great Britain. The following tables include indicators on population, earnings and VAT registered firms.

	Population (2009)		Earnings (2010)	
	Number	% change on previous year	Gross weekly pay (£)	% change on previous year
Clackmannanshire	50,540	0.1	461.0	7.9
Edinburgh, City of	477,660	1.3	524.8	1.3
Falkirk	152,480	0.6	478.0	3.3
Fife	363,460	0.4	479.1	3.0
Midlothian	80,810	0.3	481.9	13.1
North Lanarkshire	326,320	0.2	448.4	4.3
South Lanarkshire	310,930	0.3	492.4	-1.2
West Lothian	171,040	0.9	459.0	8.1
Scotland	5,194,000	0.5	486.9	3.1

Sources:
ONS Claimant Count/ONS mid year (2009) population estimates

WARD UNEMPLOYMENT (January 2011)

The following table is a breakdown of unemployment by ward, and the area of West Lothian covered by each ward, and based on the old 32 ward scheme (up to date data for the current Multi-member Wards is not yet published by DWP).

WARD AREA		Male JSA claimants	Female JSA claimants	Total JSA claimants	
	Area covered by ward	number	number	number	rate
Polkemmet	Whitburn	170	65	235	7.9
Craigshill	Livingston	172	67	239	7.5
Armadale Central	Armadale	154	52	206	7.3
Boghall	Bathgate	127	56	183	6.8
Blackburn	Blackburn	165	57	222	6.5
Durhamtoun	Bathgate	114	47	161	6.4
Newland	Bathgate	122	61	183	6.4
Ladywell	Livingston	138	56	194	5.8
Croftmalloch	Whitburn	124	44	168	5.3
